Global Initiative Against Transnational Organized Crime (GI-TOC)
Geneva, Switzerland

Subject: Application for Monitoring, Evaluation and Reporting Officer – ECOSOLVE

Dear Selection Committee,

When tracking organised crime networks or mapping environmental destruction, data only tells part of the story. The real challenge, and where my work sits, is making sure that raw information connects back to what is actually happening on the ground, whether that means tracking cross-border illicit trade or understanding how local communities and environmental defenders navigate security risks. I am writing to express my strong interest in the Monitoring, Evaluation and Reporting Officer position for the ECOSOLVE programme.

I want to be transparent up front: my primary background isn't as a traditional, full-time M&E officer. Instead, my work has been built around information architecture, quantitative and qualitative data systems, international research, and strategic communications. But I see M&E as the exact analytical engine needed to keep complex international programmes grounded, coherent, and accountable.

Over the past few years, I have routinely handled the core mechanics that effective M&E relies on. At the World Meteorological Organization (WMO) in Geneva, I built SharePoint monitoring structures to track over 100 global project portfolios, maintaining data integrity, monitoring deliverable milestones, and synthesizing evidence for executive reporting. At the UNHCR Global Protection Cluster, I managed digital knowledge platforms across 15 global operations,ensuring technical protection toolkits and field data reached frontline humanitarian actors. Through my independent field interest, timothycastillon.com/*field/notes*, and my academic research on urban risk and environmental resilience published through the University of Porto, I pair structured field data with human-centered storytelling. Measuring something as complex as network disruption requires both quantitative tracking and qualitative context, a balance I bring to every project.

GI-TOC's mission to build new methods for measuring environmental crime disruption is work I find deeply compelling. Because ECOSOLVE spans Latin America, Asia, and Africa, my experience bridging international teams, reviewing partner narrative reports, and translating dense findings into clear donor updates and newsletters allows me to step in and add value quickly.

I welcome the opportunity to discuss how my background in data systems, research, and impact reporting can support the ECOSOLVE team and GI-TOC's global Secretariat.

Best regards,

Timothy Earl Mateo Castillon
